PROFESSIONAL SUMMARY

Computer Science undergraduate building a strong, practical foundation in Data Science and Machine Learning — from data cleaning and feature engineering through model building, evaluation, and deployment. Comfortable working across classification, clustering, and NLP problems, and translating analysis into working, deployed applications using Python, Scikit-learn, PyTorch, Flask, and Streamlit. Genuinely curious about how data-driven systems are built end-to-end, and looking to grow further as a Data Science / Machine Learning Engineer.

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript, SQL
Data Analysis & Visualization: EDA, Data Cleaning & Preprocessing, Statistics, Matplotlib, Seaborn, Plotly, Streamlit
ML / AI: Machine Learning, Deep Learning, NLP, Classification, Clustering, Feature Engineering, Hyperparameter Tuning
Libraries / Frameworks: Scikit-learn, XGBoost, PyTorch, TensorFlow, Pandas, NumPy, Flask, FastAPI
Cloud / MLOps: AWS, CI/CD (GitHub Actions), Git, GitHub
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

PROJECTS

Medical Lab Report Assistant | AI-Powered Health Tool — Live Demo

- Built a Streamlit application that lets users upload medical lab reports and automatically extracts key health parameters, flagging values that fall outside normal reference ranges.
- Combined document parsing with a data-driven interpretation layer to present results in plain, easy-to-understand language for non-technical users.

SnapClass | AI-Powered Attendance System — Live Demo

- Designed and built an AI-powered attendance platform using computer vision to recognize every student's face from a single class photo, plus voice biometrics for sequential roll-call verification.
- Implemented QR-based course enrollment and a real-time teacher dashboard, built with FaceRecognition, Dlib, Resemblyzer, and Librosa on a Streamlit/Flask stack with Supabase for storage and auth.

Smart Customer Segmentation System for E-Commerce | Unsupervised ML — Live Demo

- Built and deployed an interactive tool that segments e-commerce customers into actionable groups using RFM feature engineering and K-Means clustering, validated with the Elbow Method and Silhouette Score.
- Reduced feature dimensionality via PCA while retaining over 90% of variance, improving cluster interpretability in the live, user-facing Streamlit app.

EDUCATION

B.Tech, Computer Science & Engineering — Biju Patnaik University of Technology (BPUT), Odisha
2023 – 2027 | CGPA: 8.48 / 10

Higher Secondary (12th) — Council of Higher Secondary Education (CHSE), Odisha
Percentage: 62.1%

Secondary (10th) — Board of Secondary Education (BSE), Odisha
Percentage: 83.33%

CERTIFICATIONS

- Oracle Cloud Infrastructure (OCI) AI Foundations Associate — Oracle, 2025
- AICTE–IBM Generative AI and Cloud Computing Virtual Internship
- IoT & Entrepreneurship-cum-Skill Development Program (E-SDP) — Ministry of MSME, Govt. of India

TECHNICAL EXPOSURE

- BPUT Hackathon 2025 — Built a working prototype of an AI-based CRM Assistant under time constraints and presented it to a technical panel, demonstrating rapid iteration and MVP delivery.
- Attended technical seminars on Small Language Models (efficiency and scalability), DevOps (CI/CD automation), and Decentralized Encrypted Messaging (BitChat), staying current with emerging trends across AI and systems engineering.
